

ABDULQUDUS AYOOLA

SOFTWARE ENGINEER

 [Linkedin](#) |  [Email address](#) |  [Github link](#)

PROFESSIONAL SUMMARY

Full Stack Engineer with three years experience in building, shipping, and maintaining web applications from design to production. Experienced with React, NextJS, HTML/CSS, Javascript, Typescript, Node, Tailwind, PostgreSQL, and MongoDB. Highly capable at translating static design files (Figma) into dynamic UIs. Customer-centric and constantly thinking on how to improve user experience.

WORK EXPERIENCE

SantaBrowser

Software Developer

01/2024 - 04/2025

A privacy-focused web browser designed for speed, security, and a seamless user experience.

Technologies: *TypeScript, JavaScript, React.js, Styled Components, Web APIs*

- Developed and maintained core components of the browser interface, including tab management, address bar, settings panel, and modal interactions.
- Optimized rendering performance and reduced load times across key UI components, improving overall responsiveness by 25%.
- Collaborated with UX designers and product managers to implement intuitive navigation patterns and enhance user engagement.
- Integrated Web APIs for features like bookmarks, history tracking, and theme switching, contributing to a more personalized browsing experience.

Moralis

Technical Support Engineer

02/2023 - 11/2023

A leading Web3 development platform that empowers developers to build and scale dApps rapidly with powerful APIs and real-time blockchain data. Supported a global community of builders by solving technical challenges and contributing to product improvement.

Developer Support & Internal Collaboration: Technologies: *JavaScript, Typescript, Moralis SDK/API, GitHub*

- Resolved 700+ developer issues across integration, authentication, and smart contract logic contributing to a 35% reduction in average ticket resolution time.
- Worked with internal engineering and partner teams to debug and optimize high-priority projects, increasing deployment success rate by 20%.
- Authored and updated SDK and API documentation to make concepts more accessible, reducing developer confusion and support requests by 25%.
- Created reusable support workflows and internal guides that improved onboarding for developers.

Hackathon Judging & Community Involvement: Represented Moralis as a judge and technical reviewer for prominent hackathons including Chainlink Hackathon, Avalanche (Avax) Hackathon and Polygon Hackathon.

- Reviewed 100+ submissions, providing constructive feedback that helped developers improve product viability, and SDK usage driving loyalty and increasing adoption within the Moralis ecosystem.

Internal Hackathon – Winner (Team of 4):

- Collaborated with a cross-functional team to build an NFT-gated access system during a 48-hour internal hackathon.
- Won 1st place among 10+ teams for innovation and seamless user experience in Web3 access control.

PROJECTS

EFileBoi

Full-Stack Web Engineer

SaaS for custom BOI filings via FinCEN's BOI eFiling system (<https://boiefiling.fincen.gov>).

- Engineered a full-stack platform empowering US-registered businesses to submit Beneficial Ownership Information reports via the FinCEN API with 100% compliance and a 50% reduction in manual processing time.

Solvre

Full-Stack Web Engineer

Decentralized bounty platform for transparent task delegation.

- Built a multi-view web application, for posting bounties, reviewing submissions, and milestone-driven payouts fostering seamless global collaboration and fair, immediate compensation..
- Developed the front-end integration using Next.js, Material UI and Celo Composer delivering responsive and user-friendly experiences.
- Engineered an end-to-end smart contract with WeaveDB for robust data management, leveraging Agile development.
